

Polar Portal Complete Feature Walkthrough

A page-by-page script for demonstrating the public website, submission workflow, editorial tools, and publishing pipeline.

Recording note: This script is not time-bound. Record at a natural pace and spend longer on the workflows most important to your audience. Replace bracketed IDs and names with real demo records. Use test accounts and avoid showing private user data, credentials, or API keys.

Part 1 - Public website and research

Welcome and home page

/

ON SCREEN

Start at the home page. Show the main navigation, research highlights, expedition cards, archive preview, updates, quick links, and footer.

VOICEOVER

Welcome to the National Centre for Polar and Ocean Research portal. The website brings together information about NCPOR, India's polar and ocean research, expeditions, data services, public updates, and research resources. From the home page, visitors can move into the archive, explore research programmes, follow community stories, or find institutional information and opportunities.

Navigation, accessibility, and institutional information

/about | /institution/overview | /virtual-tour | /accessibility | /sitemap | /contact

ON SCREEN

Open the About menu, demonstrate the text-size controls, show the virtual-tour page, then point to the sitemap, contact, and accessibility links.

VOICEOVER

The About section introduces NCPOR and its mandate, stations, organisation, leadership, governance, reports, and public-information resources. The virtual-tour page provides an overview of the campus and links to the official tour. Visitors can also adjust text size and use the accessibility information and sitemap to navigate the site.

Use a quick menu montage for the additional institutional pages listed in the route index at the end.

Expeditions and research programmes

[/expeditions/antarctica](#) | [/expeditions/arctic](#) | [/expeditions/himalaya](#) | [/expeditions/iodp](#) | [/expeditions/southern-ocean](#) | [/institution/maitri](#) | [/institution/bharati](#)

ON SCREEN

Visit representative expedition pages and the Maitri or Bharati station page. Open the Science and Research menu and select a programme.

VOICEOVER

The Expeditions section covers work across Antarctica, the Arctic, the Himalaya, IODP, and the Southern Ocean. Visitors can explore India's Antarctic programme, its research stations, and related expedition information. Research pages introduce programme areas such as polar science and the cryosphere, ocean sciences, geoscience, biological sciences, and mineral-resource exploration. The site also presents research achievements and outreach information.

[/research](#) | [/research/polar-science](#) | [/research/ocean-sciences](#) | [/research/geoscience](#) | [/research/biological-sciences](#) | [/research/mineral-resources](#) | [/research/achievements](#) | [/research/outreach](#)

Part 2 - Discovery, services, and community

Searchable research archive and resource details

[/explore](#) | [/assets/\[asset ID\]](#) | [/gallery](#)

ON SCREEN

Search for a report or dataset. Demonstrate format, region, expedition, year, and sort filters. Open a result and show its detail page. Switch to image search and visit the gallery.

VOICEOVER

The Explore page is the searchable research archive. Visitors can find reports, datasets, publications, photographs, and videos, then narrow results using the available filters. Each result opens a resource detail page with its available description and metadata. Image search and the gallery provide additional ways to discover visual resources.

Data services

[/data-centre](#)

ON SCREEN

Show the three data-service cards without leaving the video, or open each external service briefly if the recording includes browser navigation.

VOICEOVER

The Data Centre page links to specialist systems: the National Polar Data Center, meteorological data services, and the Live Access Server. These services complement the portal's own archive with dedicated tools for research data access.

External links: <https://npdc.ncpor.res.in/npdc/> | <https://data.ncpor.res.in/> | <https://las.ncaor.gov.in/>

News, tenders, careers, and opportunities

[/news](#) | [/tenders](#) | [/careers](#) | [/careers/\[opportunity\]](#) | [/careers/internships](#) | [/careers/phd](#)

ON SCREEN

Use the news category controls and search box. Visit Tenders and Careers, then open a specific opportunity.

VOICEOVER

News and science updates can be browsed by category or searched. The opportunities area brings together tender and procurement notices, career information, internships, and PhD programme details. Visitors can open an opportunity to see its dedicated page.

Community feed, stories, profiles, and inbox

```
/community | /community?type=story | /community?type=reel | /community?type=post | /community/inbox | /users/[username]
```

ON SCREEN

Show the feed and content filters. Open one post, story, or reel. If available, demonstrate a signed-in interaction, inbox, and profile.

VOICEOVER

The Community page brings together published posts, science stories, and reels. Visitors can browse by content type and open individual items. Signed-in users can use the engagement controls available to their account, view their inbox, and visit community profiles.

Part 3 - Accounts and submissions

Registration and account access

`/login | /register | /submitter/register | /submitter/pending | /activate`

ON SCREEN

Show login and registration without exposing real personal information. Use a test account for activation or pending-account screens.

VOICEOVER

The portal provides sign-in and registration flows. Contributors can register for a submitter account. Accounts awaiting approval are directed to a pending page, and account activation uses a separate activation link. The workspace shown after sign-in depends on the account's role.

Submitter workspace and file upload

`/submitter/datasets | /submitter/datasets/new | /submitter/datasets/[asset ID]`

ON SCREEN

Sign in as a submitter. Show the submissions list, create a sample submission, choose a type, enter metadata, and open its detail page to show upload and status controls.

VOICEOVER

In My Submissions, contributors can manage their records and start a new submission. Supported types include scientific datasets, reports, publications, images, videos, and research activities. The submitter adds metadata, uploads the file, monitors processing and review status, and submits the record for review when it is ready. The detail page also shows revision information if changes are requested.

Part 4 - Staff workspace

Repository content management

`/admin/content`

ON SCREEN

Sign in as an editor or administrator. Demonstrate record search or filters, upload controls, status indicators, and available actions on a demo asset.

VOICEOVER

Staff use the Content page to manage repository records. They can add and find assets, inspect indexing and review status, retry failed indexing when available, and manage records. This is where uploaded material is prepared for discovery and downstream editorial use.

AI Studio and grounded text posts

`/admin/generate`

ON SCREEN

Select a ready report or dataset with indexed chunks. Choose Text Post, select a tone, generate a draft, and show its citations.

VOICEOVER

AI Studio creates outreach drafts from indexed repository content. Staff select reports or datasets, choose an output format and tone, and generate a draft. The system attaches source citations and checks them against indexed text. Generated content remains a draft and must go through editorial review. When OpenRouter is configured, source text is sent to that service for generation.

Editorial review, scheduling, and webhook delivery

`/admin/editorial`

ON SCREEN

Show the editorial board, an item preview, comment area, calendar, status controls, and webhook state on a published feed item if available.

VOICEOVER

The Editorial Desk is where staff review drafts, leave feedback, and manage approval, scheduling, and publication. Once a feed item is published, the outbound webhook can send its post payload to Zapier or Make.com. The automation platform can then connect the content to social accounts. Staff can check delivery status and retry an event when the interface offers that action.

Reel Studio and analytics

`/admin/reels | /admin/analytics`

ON SCREEN

Show the reel form and workflow list, then switch to Analytics and point out search activity, popular assets, and system indicators.

VOICEOVER

The Reel Studio lets staff create a reel draft using a video already in the repository, add a caption, and send it through editorial review. Analytics summarizes repository use and system activity, including popular resources and search queries.

Closing

/

VOICEOVER

From public research discovery to contributor submissions, editorial review, and outreach publishing, the portal brings NCPOR information and content workflows together. Thank you for watching.

Route index for the recording

Use this checklist while recording. Dynamic route segments in square brackets must be replaced with real slugs or IDs from the demo site.
